

# NJ30HW Series

30W 4:1 Regulated Single & Dual output

electronicpowersolutions

## Features

- Wide 4:1 Input Range
- Isolation Voltage up to 5000VAC
- Reinforced Insulation for 250Vrms Working Voltage
- Efficiency up to 89%
- Under Voltage Lockout
- Remote On/Off Control
- Adjustable Output Voltage
- Continuous Short Circuit Protection
- Over Current Protection
- Over Voltage Protection
- Over Temperature Protection

**TEST CONFIGURATIONS**

**Input Reflected Ripple Current Test Step**

Input reflected ripple current is measured with a source inductor  $L_{in}$  (12 $\mu$ H) and a source capacitor  $C_{in}$  (47 $\mu$ F, ESR<1.0 $\Omega$  at 100KHz) at nominal input and full load.

**DESIGN & FEATURE CONFIGURATIONS**

**Over Current Protection**

The module includes an internal over current protection circuit, which will endure current limiting for an unlimited duration during output over load condition. If the output current exceeds the OCP set point, the module will shut down automatically (hiccup). The module will try to restart after shut down. If the over load condition still exists, the module will shut down again.

**Over Voltage Protection**

The module includes an internal output over voltage protection circuit, which monitors the voltage on the output terminals. If this voltage exceeds the over voltage set point, the module will activate the control loop of internal circuit to clamp the output voltage.

**Over Temperature Protection Test**

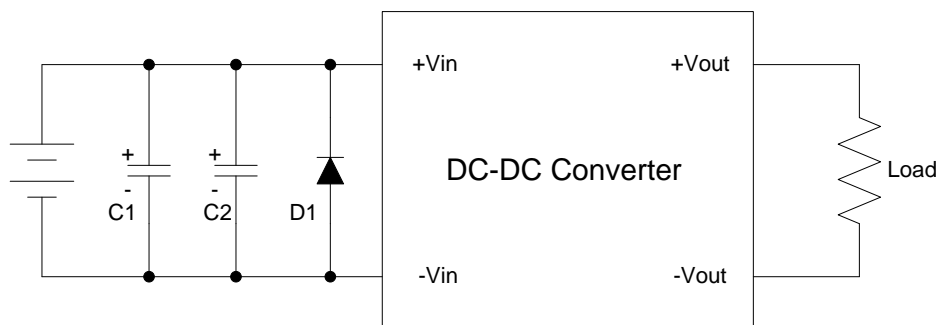

The over temperature protection consists of circuitry that provides protection from thermal damage. If the temperature exceeds the over temperature threshold the module will shut down. The module will try to restart after shut down, if the over temperature condition still exists during restart, the module will shut down again. This restart trial will continue until the temperature is within specification.

**Remote Module ON / OFF**

Positive logic turns on the module during high logic and off during low logic. Remote module on/off can be controlled by an external switch between the CTRL terminal and -Vin terminal. For positive logic if the remote feature is not used, please leave the CTRL pin floating.

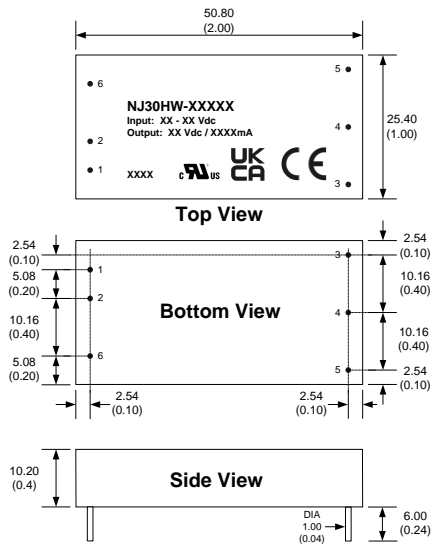

**EMC Filter**

The Circuit is used to meet Surge & EFT test.
